A.U.FIRE - SOLE SOURCE LETTER

This letter serves to confirm that Creative Law Enforcement Resources, Inc., doing business as CLEAR, Inc., and Accuracy Under Fire (A.U.FIRE), is the sole creator and patent holder of the ACCURACY UNDER FIRE (A.U.FIRE) RESILIENCE TRAINING SYSTEM, under **U.S. Patent #8,308,482 titled "Personal Under Fire Trainer for Security and Military Personnel," issued on November 13, 2012.** Over several years, CLEAR, Inc. has developed this exceptional training system, which simulates incapacitating injuries with many features not found in any other product on the market.

A.U.FIRE is manufactured in the USA and distributed exclusively by CLEAR, Inc. It stands alone in its market; no other company produces a comparable or competitive product. Unlike other known systems like VirTra Systems Threat-Fire or the SETCAN StressVest, which utilize a localized static shock to simulate gunfire, A.U.FIRE employs electrical muscle stimulation (EMS) TENS unit technology to target and completely contract specific muscle groups. This results in immediate limb immobilization, offering a safe physical and mental experience akin to real-life wounding.

This unique system allows up to seven trainees to experience the simulation of being shot, stabbed, or subjected to severe blunt force trauma, enabling them to adapt to such stress in a controlled environment. The future development of A.U.FIRE includes expanding its capability to control abdominal and lower leg muscle contractions, further enhancing its uniqueness.

A.U.FIRE not only improves trainee's stress management but also builds confidence and prepares them for high-stress situations by offering realistic, worst-case-scenario training. This advanced unmatched training technology is only available through CLEAR. For further information, please do not hesitate to contact us or visit our website at www.A.U.FIRE.com.

Thank you for your interest in our product.
